Introduction

The proposed project “Online Movie Ticket Booking System” is the process whereby consumers directly buy Movie Tickets online from a multiplex website interactively in real time without an intermediary service over the internet.

The given system provides the detailed working of the online ticket booking processing and what happens when any one of us goes to book a ticket online.

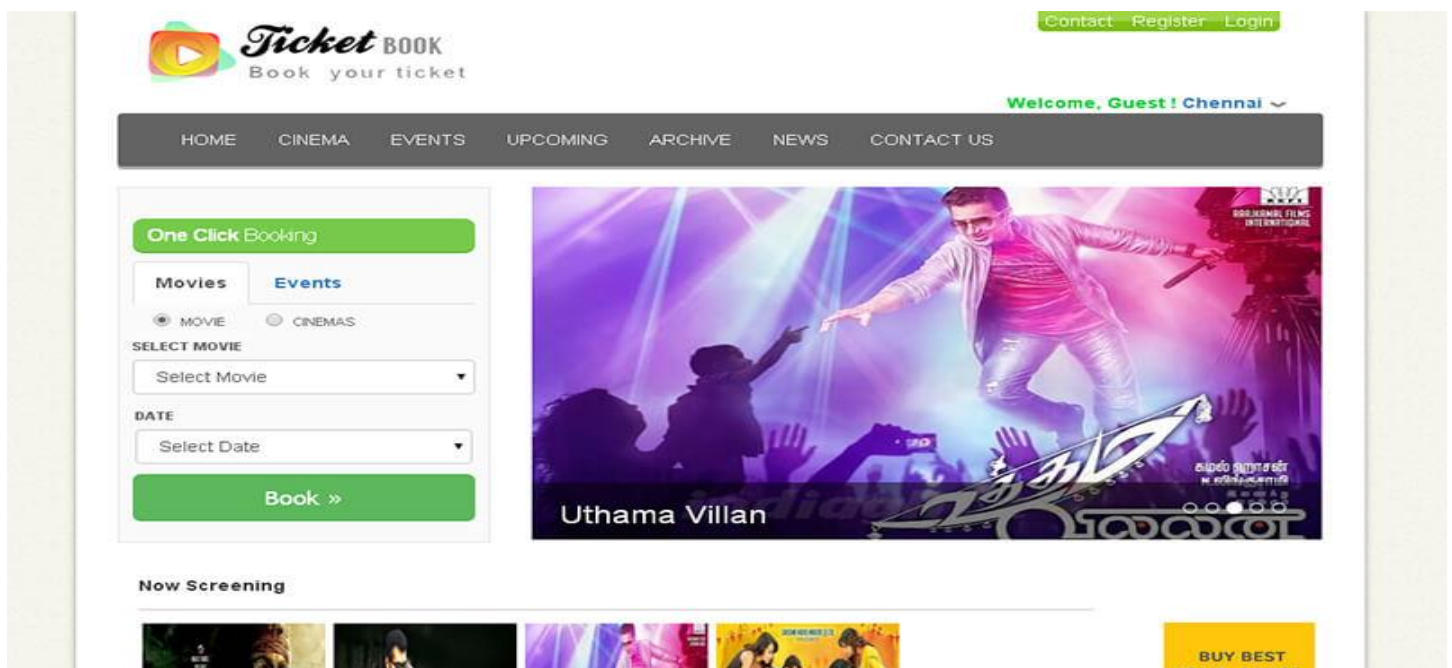

Objective

The objective of this system is to store information of the new costumer, different types of movie show timing, ticket rates of different types on show class etc. It develops a good user friendly website with many online transactions using a database. It gives facility to change username and Password of User account.

It has the facility to generate different Reports which are helpful for the management in decision making

System Description

- When the user will open the webpage , He/She will land at the title page where details will be provided which include “Home” , “About” , “Contact us”.
- The user will be able to see the current movie offers via images .
- If user wants to book a ticket the user has to click on the movie image .
- When user clicks on movie image he has to fill his details for successful booking.
- The user has the option to select the cinema and the Show timings .

Conclusion

The Website will help users to easily book their movie tickets within few minutes

Users can easily choose the location and timing of the respective movie and the payment is done on the site itself .
